

# GLOBAL CONNECTIVITY, MONITORING & DATA ANALYTICS

Monitoring a remote application is a necessity of modern automation. Let Power/mation implement global access between your company and its assets to optimize the use of physical resources. Power/mation will give you the edge over competitors in technology, cost savings and revenue generation.

## Enhance Your Competitive Advantage

- Instant support ensuring machine uptime
- Operate machinery without physical access to the machine network
- Continuous end customer process improvement through data collection and analytics
- Proactive maintenance scheduling
- Reduce end customer raw material and energy usage
- Access assets via mobile apps anywhere

## Reduce Costs

- Cut travel time and expenses
- Leverage engineering resources to simultaneously service global customers
- Optimize field service deployment through instant notifications
- Avoid unnecessary warranty claims with machine monitoring

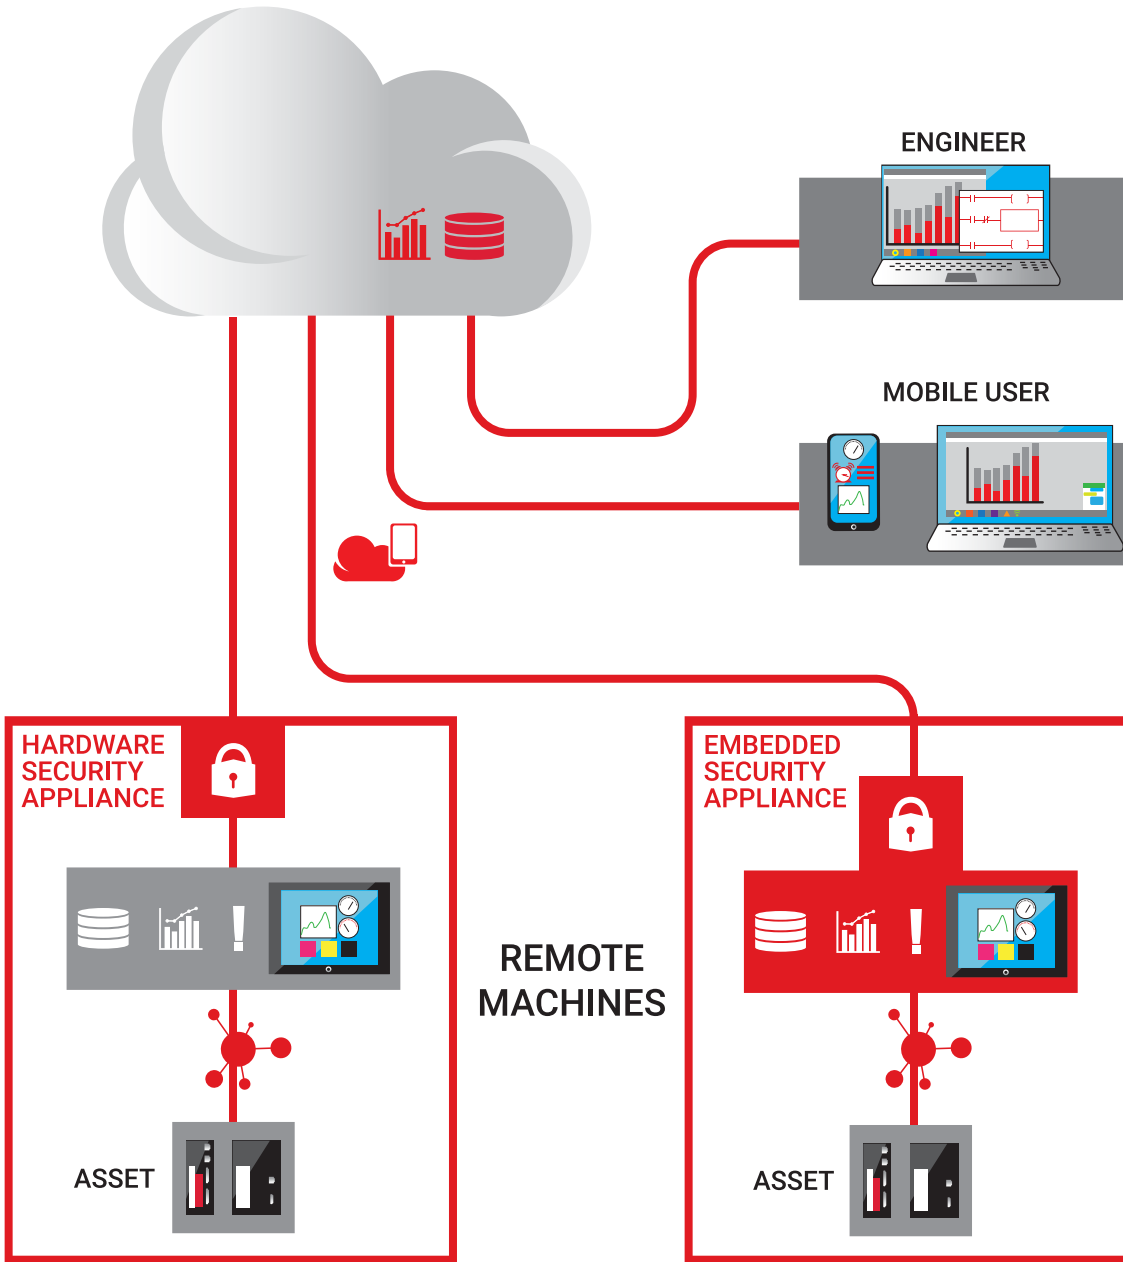

## Increase Revenue

- Increase service contract revenue through predictive maintenance
- Forecast demand and levels of consumables to ensure quality
- Provide 24/7 machine monitoring and extended warranties

# Connecting Your Assets

## Web Services

- Historical Reporting
- Cloud Dashboards
- Asset Dashboards
- Alarm History

## Security

- SSL (HTTPS)
- IPsec VPN

## Connectivity & Infrastructure

- Cordsets
- Routers
- Switches

## Data Storage

- Cloud-Based
- Asset-Based

## Analytics & Reporting

- Downtime Reports
- Predictive Maintenance
- Consumable Tracking
- Proactive Service & Dispatching

## Notifications

- Email Alerts
- Text Messages
- Push via Mobile App
