

Remote Access Secomea Box

Are you an equipment builder that produces machines that are installed into manufacturing facilities? Do you find it more and more difficult to connect to your machines in those facilities?

OR

Do you work in a facility where machine builders are pressuring you to grant them access to the machines they provided?

Power/mation offers a portable remote access connection box. As an OEM, you can ship this box to your end customer and they can connect the LAN port to their facility for you to access the OEM machine. If you are an end user that is concerned about remote access within your facility, Power/mation also offers a cellular version which runs in parallel to offer isolation and enabling secure access to the OEM machine.

[Click here](#) for a video on getting started with Remote Access and Secomea.
